Climbing the Ladder to Data Governance Maturity

Level 1: Functional silos in data management
- Cross-functional performance measures.
- Analysis across functions and asset lifecycles.
- Flexible approach to data integration.
- Broader awareness and capabilities.

Level 2: Measuring & monitoring data
- Data governance as an organizational priority.
- Data quality practices formally implemented.
- Integrated systems and data bases.
- Scalable information architecture.

Level 3: Managed data, and information lifecycle management
- Enterprise-wide, industry-standard reference data model.
- Alignment with business processes.
- Information Integration with business partners.
- Single source of truth.

Level 4: Fully-integrated data governance and stewardship
- Fully integrated business intelligence and analysis covering asset lifecycles.
- Data integration with on-demand information.
- Accountability across entire information supply chain.
- Mature capabilities

Level 5: Fully-integrated data governance and stewardship
- Data Governance Maturity in Real Estate

OSCRE is focused on enabling organizations to reach level 3 and make the transition onwards to level 4.
